Dispatch logs: change review

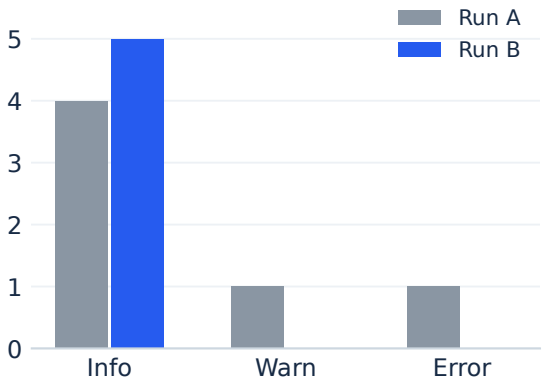
Synthetic files • illustrative report • generated from the linked logs

Run B accepted 3 of 3 records; Run A accepted 2.

Recorded median request latency: 235 ms → 110 ms.

Exact-line comparison: 5 removed, 4 added, 1 unchanged.

Events by severity



Recorded request latency

Each dot is a recorded request; bar = median.

Line-level changes

File-local line numbers. Replacements appear as a removal plus an addition.

Reading the comparison

Timestamps are preserved. Counts include retry attempts; latency dots are observations, and the two short runs supply this sample's complete evidence. Client indicators are agreed from the supplied format before the full report. Source: run-a.log, run-b.log, make-report.py.
